DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-4, 8-11, 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicants admitted prior art (figure 5A-5B pages 2-7) in view of Lin et al US 6, 396,089).

Regarding claims 1,3,4,9,10 applicant's admitted prior art discloses a solid state imaging device comprising a semiconductor (11), light shield (14); a light reception section (12); passivation section (15) film overlying the light shield section, light reception sections and aperture. However, applicant admitted prior art fails to discloses a planar /flat top surface. Although, it is well known in the art, as taught by Lin.

In the same field of endeavor, Lin discloses the planarization of semiconductor device where the passivation layer with SOG film that (304,306,308,310) is planarized (col. 3, lines 22-65). The passivation films have several layers that are placed over light reception area. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify, applicant's admitted prior art, as taught by Lin, to provide superior insulating property.

Regarding claim 2, applicant discloses the passivation film is made of silicon nitride based film (see pages 2-4).

Art Unit: 2873

Regarding claim 8, applicant's admitted prior art discloses a solid state imaging device comprising a semiconductor (11), light shield (14), a light reception section (12); passivation section (15) film overlying the light shield section, light reception sections and aperture.

However, applicant admitted prior art fails to discloses a planar /flat top surface, chemical machine polishing and insulation section. Although, it is well known in the art, as taught by Lin.

In the same field of endeavor, Lin discloses a method for manufacturing a semiconductor image sensor where the passivation film is planarized and where in the method comprises applying an SOG film and a forming another film over the SOG for forming the passivation section (col. 3, lines 22-65) to produce a substantial planarized surface. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify applicant's admitted prior art, as taught by Lin, since it would provide a planarized passivation layer which contributes to protection of the circuit and performance.

Regarding claim 13, applicant's admitted prior art discloses a solid state imaging device comprising a semiconductor (11), light shield (14); a light reception section (12); passivation section (15) film overlying the light shield section, light reception sections and aperture where the passivation provides moisture and chemical resistance (see page 3). However, applicant admitted prior art fails to discloses a planar /flat top surface. Although, it is well known in the art, as taught by Lin.

In the same field of endeavor, Lin discloses the planarization of semiconductor device where the passivation layer with SOG film that (304,306,308,310) is planarized (col 3, lines 22-65) Thus, it would have been obvious to one of ordinary skill in the art at the time the invention

Art Unit: 2873

was made to modify, applicant's admitted prior art, as taught by Lin et al. to provide a planar surface which enhances image quality and provides protection for the detector.

3. Claims 5,7,11,12, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicants admitted prior art (figure 5A-5B pages 2-7) in view of Lin et al US 6, 396,089), further in view of De Santi et al (EP 0887 847 A1).

Regarding claims 5 and 11, applicant's admitted prior art discloses a solid state imaging device comprising a semiconductor (11), light shield (14); a light reception section (12); passivation section (15) film overlying the light shield section, light reception sections and aperture. However, applicant admitted prior art fails to discloses a planar /flat top surface and chemical machine polishing as claimed. Although, it is well known in the art, as taught by Lin.

In the same field of endeavor, Lin discloses the planarization of semiconductor device where the passivation layer with SOG film that (304,306,308,310) is planarized (col. 3, lines 22-65). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify, applicant's admitted prior art, as taught Lin et al. to provide a planar surface which enhances image quality and provides protection for the detector.

In addition, the application and Lin discloses applying the thin film forming the passivation section by using a CVD technique or the like. Although, applicant and Lin fail to produce a planarized layer using chemical mechanical polishing, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify applicant and Lin, to include this process since it is a notoriously well known semiconductor planarization layering process, as taught by De Santi (EP 0887,847) in col. 3, lines 35-36.

Art Unit: 2873

Regarding claims 7 and 12, applicant's admitted prior art discloses a solid state imaging device comprising a semiconductor (11), light shield (14); a light reception section (12); passivation section (15) film overlying the light shield section, light reception sections and aperture where the passivation provides moisture and chemical resistance (see page 3). However, applicant admitted prior art fails to disclose a planar /flat top surface, an insulation layer and chemical machine polishing as claimed. Although, it is well known in the art, as taught by Lin.

In the same field of endeavor, Lin discloses the planarization of semiconductor device where the passivation layer with SOG film that (304,306,308,310) is planarized (col. 3, lines 22-65). The passivation films have several layers that are placed over light reception area. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify, applicant's admitted prior art, as taught by Lin, to provide superior insulating property.

In addition, the application and Lin discloses applying the thin film forming the passivation section by using a CVD technique or the like. Although, applicant and Lin fail to produce a planarized layer using chemical mechanical polishing, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify applicant and park, to include this process since it is a notoriously well known semiconductor semiconductor planarization layering process, as taught by De Santi (EP 0887,847) in col. 3, lines 35-36.

Regarding claim 14, applicant's admitted prior art discloses a solid state imaging device comprising a semiconductor (11), light shield (14); a light reception section (12); passivation section (15) film overlying the light shield section, light reception sections and aperture.

However, applicant admitted prior art fails to discloses a planar /flat top surface. Although, it is well known in the art, as taught by Lin.

Art Unit: 2873

In the same field of endeavor, Lin discloses the planarization of semiconductor device where the passivation layer with SOG film that (304,306,308,310) is planarized (col 3, lines 22-65) Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify, applicant's admitted prior art, as taught by Lin et al. to provide a planar surface which enhances image quality and provides protection for the detector.

In addition, the application and Lin discloses applying the thin film forming the passivation section by using a CVD technique or the like. Although, applicant and Lin fail to produce a planarized layer using chemical mechanical polishing, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify applicant and Lin, to include this process since it is a notoriously well known semiconductor planarization layering process, as taught by De Santi (EP 0887,847) in col. 3, lines 35-36.

Allowable Subject Matter

4. Claim 6 is allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 6, prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the dependent claims, in such manner that a rejection under 35 U.S.C 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims, which include a method for producing a solid state imaging device where flattening of the passivation section is performed under the condition that a selective ration of 1:1 implemented as claimed.

Art Unit: 2873

Response to Arguments

Applicant's arguments filed 7/9/03 have been fully considered but they are not persuasive. Applicant argues Lin teaches oxide layer 304 is the **only** part of the passivation layer. However, the Examiner must respectfully disagree. As Lin teaches in col. 1, lines 45-50, the passivation layer of prior art consisted of multiple layers of film. Also see col. 3, lines 23-36 and 60-65; Lin discloses that 304, and 306, 308 and 310 comprise the passivation layer. This multilayer is overlaid a semiconductor substrate comprising a sensor (see col. 3, lines 16-20).

Applicant also argues that Lin's passivation region doesn't overlie the light shielding, light reception, and/or aperture layer. However, the Examiner never asserted Lin discloses the claimed structure. Applicant's admitted prior art discloses a sensor where the passivation layer overlies the claimed structure. Lin teaches that a semiconductor image sensor can have a planarized passivation layer.

Lastly, applicant argues the SOG layer has nothing to do with minimizing reflected or refracted light caused by stepped portion. However, the Lin doesn't have to solve the same problem as applicant. Thus, the rejection will be repeated.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yoshida (US 2001/0042875) discloses a solid state imaging device capable of improving sensitivity without causing rise in depletion voltage and shutter voltage; and

Yasukawa (US 2001/0043175) discloses a liquid crystal panel substrate, liquid crystal panel, and electronic equipment and projection type display device both using the same.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time 7. policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alicia M Harrington whose telephone number is 703 308 9295. The examiner can normally be reached on Monday - Thursday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Georgia Epps can be reached on 703 308 4883. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 308 0956.
